Environment Setup
Create A Flask Project

TEAM ID	**PNT2022TMID30108**
PROJECT NAME	**Skill/ Job Recommender Application**
DATE	**01 NOVEMBER 2022**
STEPS	**Coding and Install process**

CODE:

```python
# -*- coding: utf-8 -*-
"""
Created on Sun Oct 16 08:55:24 2022

@author: Lucifer
"""

# Importing flask module in the project is mandatory
from flask import Flask
app = Flask(__name__)
# The route() function of the Flask class is a decorator,
@app.route('/')
# ‘/’ URL is bound with hello_world() function.
def hello_world():
    return 'Hello World'
# main driver function
if __name__ == '__main__':
    # run() method of Flask class runs the application
    # on the local development server.
    app.run()
```

Flask
web development, one drop at a time
Welcome to Flask's documentation. Get started with Installation and then get an overview with the Quickstart. There is also a more detailed Tutorial that shows how to create a small but complete application with Flask. Common patterns are described in the Patterns for Flask section. The rest of the docs describe each component of Flask in detail, with a full reference in the API section.
Flask depends on the Jinja template engine and the Werkzeug WSGI toolkit. The documentation for these libraries can be found at:
Jinja documentation
Werkzeug documentation
User's Guide
Flask provides configuration and conventions, with sensible defaults, to get started. This section of the documentation explains the different parts of the Flask framework and how they can be used, customized, and extended. Beyond Flask itself, look for community-maintained extensions to add even more functionality.
